

Amendment Number 0002

BAA 12-008

"Electronics Warfare Technology"

The purpose of Amendment Number 0002 is to provide clarification for the issue of power handling under Section 6, entitled, "Research Opportunity Description" sub paragraph C entitled, "Non-Mechanical Beam Steering". As a result, Section 6 Sub paragraph C of the BAA is revised to incorporate the following language:

"Beam steering technologies proposed should be capable of directing continuous-wave (CW) or pulsed laser beams at power levels of not less than 10 Watts (threshold) to greater than 20 Watts (objective) across as much of the full spectral range of operation as possible. [Note: for pulsed lasers the required output power is measured as an average over 1 second of pulsed emission.]"
