

ONR Global TechSolutions

TechSolutions: Warfighter Rapid Response

AT A GLANCE

WHAT IS IT?

- TechSolutions is an Office of Naval Research Global rapid-response technology development program that produces prototype solutions to problems identified by Sailors and Marines.
- TechSolutions needs suggestions and engagement from warfighters of all ranks/rates/MOS' on ways to improve mission effectiveness.

HOW DOES IT WORK?

- Technology requests are submitted from any Sailor, Marine or Science Advisor.
- Every submission will be answered, even if it does not result in a project.
- Government partners are funded by TechSolutions to develop solution prototypes.

WHAT WILL IT ACCOMPLISH?

TechSolutions funds the NR&DE to develop a solution to a problem submitted by a warfighter. The prototype is demonstrated in an operational context, in coordination with the submitter, for assessment and transition planning. NR&DE members should register for an account on the website.

POINT OF CONTACT:

<https://www.onr.navy.mil/techsolutions>

TechSolutions links warfighters to the government science and technology community to help develop needed technologies as quickly as possible. Our goal is to have a solution prototype in the hands of the requesting Sailor or Marine within 12 months.

TechSolutions wants requests from anyone in the Fleet/Force. We work closely with the submitter and subject-matter experts to ensure that the problem is clear and the required solution capabilities are well-defined. We then turn to the Naval Research and Development Establishment (NR&DE) network of labs/warfare centers/UARC's for proposed solutions. The submitter can be involved throughout the process starting with recommending the best solution for funding. If available, the submitter guides the development team and participates in the prototype demonstration and assessment. Sailors and Marines are encouraged to visit our website or the ONR app and submit requests for new technology. Once a prototype is developed, TechSolutions works with the warfighter, their command, and transition sponsors to identify paths for continued support, development, or procurement, for example via an existing Program of Record, GSA catalogue listing, TYCOM supply, etc.

Doing business with TechSolutions

- TechSolutions responds to requests for technology from the Fleet and Force, not technology pushes from the Naval Research Enterprise or industry
- TechSolutions wants to hear from the Sailors and Marines on the deckplate and at the ground level
- To participate in TechSolutions projects, industry and academia members must partner with the NR&DE
