

**AMENDMENT 0006 FOR
BAA 09-011
ELECTRICALLY ACTUATED SUBMARINE CONTROL SURFACES**

1. Question: Per the BAA, we understand that it is the Navy's desire to eliminate the tie to the distributed hydraulic power system and the existing cylinder and linkages. Would a self contained electro hydrostatic/electro hydraulic solution be considered as a viable alternate?

Answer: If the proposed EHA will meet the Key Performance Parameters then it would be considered.
